## Professional Summary

Detail-oriented and resourceful Software Developer with a Diploma in IT and hands-on experience engineering interactive, state-driven web applications. Combines robust technical skills in modern JavaScript ecosystems with practical business management expertise acquired from running daily commercial storefront operations. Adept at translating complex real-world workflows, retail trends, and logistical bottlenecks into high-performance, responsive digital tools.

## Professional Skills Inventory

### *Technical & Framework Proficiencies*

- **Languages & Core Tech:** TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL
- **Frameworks & Libraries:** React.js, Next.js (App Router), Tailwind CSS
- **Version Control & Hosting:** Git, GitHub, Vercel, Netlify
- **Development Architecture:** State Machine Design, Relational Data Mapping, Client-Side Persistence Pipelines, Custom Analytics Aggregations

### *Professional & Operational Skills*

- **Business Operations & Logistics:** Inventory control provisioning, sales tracking metrics, procurement scheduling, and waste minimisation workflows.
- **Leadership & Event Coordination:** End-to-end community project management, team leadership, stakeholder negotiation, and event coordination.

- **Communication & Analytical Thinking:** Strong problem-solving capabilities, translation of physical business problems into digital logic requirements, and collaborative professional communication.

## Technical Portfolio Projects

### 1. Interactive Kitchen Logistics & Stock Storage Engine

- **Project Type:** Full-Scale Internal Operations Dashboard
- **Live Deployment:** [kitchen-logistics-engine.vercel.app](https://kitchen-logistics-engine.vercel.app)
- **Core Contribution:** Engineered a client-side business dashboard designed to automate food preparation logistics and warehouse ingredient inventory mapping. Built an interactive staging cart system featuring dynamic balance tracking and custom line-item deletion rules.
- **Key Mechanisms:** Implemented a relational data-reduction pipeline that automatically calculates bulk material demands from pending orders and docks exact measurements from stock levels upon order completion. Added smooth CSS slide-and-fade interactions for contextual inventory overrides and wired up robust data persistence using localStorage.

### 2. The World of Miss C

- **Project Type:** Brand Showcase & Customer-Facing Interface
- **Live Deployment:** [world-of-miss-c.netlify.app](https://world-of-miss-c.netlify.app)
- **Core Contribution:** Designed and deployed a polished digital storefront and platform experience dedicated to the branding, menu presence, and identity of Miss C Cake & Takeaways.
- **Key Mechanisms:** Programmed a fluid, highly accessible UI built to display multi-category catering menus, optimize asset loading speeds, and capture retail engagement trends for local food service operations.

### 3. Professional Retail Analytics Dashboard

- **Project Type:** Business Intelligence & Enterprise Data Visualization
- **Live Deployment:** [retail-analytics-dashboard-2d2qr4bcy-kcdevs.vercel.app](https://retail-analytics-dashboard-2d2qr4bcy-kcdevs.vercel.app)

- **Core Contribution:** Designed and built a comprehensive visual intelligence panel focused on business performance tracking, revenue flow optimization, and retail operations branding constraints.
- **Key Mechanisms:** Programmed reactive chart elements and data filters that aggregate sales performance, customer volume streams, and transaction trends over time. Structured highly optimized state layers to give business owners immediate, actionable insight into high-margin items and lean procurement timelines.

#### 4. TypeScript RPG Battle Simulator Engine

- **Project Type:** Algorithmic Core Logic & Architecture Project
- **Live Deployment:** [ts-rpg-simulator.vercel.app](https://ts-rpg-simulator.vercel.app)
- **Core Contribution:** Created an object-oriented, turn-based combat simulation engine built to showcase advanced logic flow and strict type systems.
- **Key Mechanisms:** Designed explicit structural type definitions for character attributes, elemental affinities, and action moves. Leveraged immutability principles within game state reducers to cleanly process turn phases, continuous effect loops, and interactive terminal console logs.

## Professional Experience

### Business Manager / Operations Lead

*Miss C Cake & Takeaways (Miss C Catering) | Klerksdorp, South Africa*

- **Operational Leadership:** Direct daily storefront operations, product provisioning, menu engineering, and revenue tracking metrics for a high-volume hospitality storefront.
- **Process Automation:** Identified administrative friction points in raw material utilization and translated those physical kitchen bottlenecks directly into functional web application blueprints.
- **Branding & Strategy:** Manage local retail branding campaigns, analyze customer stream tracking trends, and optimize procurement schedules to minimize waste.

## Education

- ✓ **Diploma in Information Technology in Software Development**
  - *Rosebank College | Pretoria, South Africa (2020 – 2022)*

✓ **National Senior Certificate (Matric)**

- *Klerksdorp Technical High | Klerksdorp South Africa (2015-2019)*
